Sandeep Kumar

Senior Software Engineer

ladwapanghal@gmail.com | +919501852073 | linkedin.com/in/sandeepchoudhari

Professional Summary

Senior Software Engineer with 9+ years of experience designing and developing scalable SaaS, FinTech, and Web3 applications using TypeScript, JavaScript, and Node.js. Expertise in NestJS, microservices architecture, real-time systems, and distributed event-driven applications. Strong experience in cryptocurrency integrations (BTC, ETH, XRP, ADA), payment gateways (Stripe, PayPal), and AI/LLM integrations including Ollama-based deployments. Proven ability to build high-performance backend systems using Docker, Redis, RabbitMQ, MySQL, and MongoDB in production environments.

Technical Skills

LANGUAGES

TypeScript | JavaScript | PHP

BACKEND

Node.js | NestJS | Express.js | Laravel | gRPC

FRONTEND

React.js | Electron

ARCHITECTURE & DEVOPS

Microservices | Event-Driven Architecture | REST APIs | Docker | CI/CD

DATABASES & CACHING

PostgreSQL | MySQL | MongoDB | Redis

MESSAGING & REAL-TIME

RabbitMQ | Kafka | Socket.IO

WEB3

Ethereum | Bitcoin | XRP | ADA

AI

LLM Integrations | GGUF models | Ollama

TOOLS & OTHERS

Git | Jira | Stripe | PayPal

Professional Experience

Senior Software Engineer

Antier Solutions (Mohali, Punjab, India)

January 2021 - Present

- Designed and developed scalable backend systems using Node.js, TypeScript, NestJS, and microservices architecture.
- Built and maintained Web3-based FinTech applications integrating Ethereum, Bitcoin, Ripple, Cardano, and other cryptocurrencies.
- Implemented real-time communication systems using Socket.IO for high-concurrency applications.
- Designed event-driven architecture using RabbitMQ for distributed systems.
- Integrated LLM and AI-based features using Ollama for intelligent automation workflows.
- Containerized and deployed services using Docker for consistent production environments.
- Implemented Redis caching strategies improving API response time and system performance.
- Collaborated with cross-functional teams delivering enterprise SaaS platforms.

Software Engineer

Dabster SoftTech (Mohali, Punjab, India)

May 2018 - January 2021

- Developed scalable applications using Laravel, Node.js, React and Angular.
- Integrated secure payment gateways including Stripe and PayPal for FinTech systems.
- Implemented push notifications and real-time systems using Socket.IO.
- Optimized database performance in MySQL and MongoDB environments.
- Enhanced application reliability using Redis caching and queue systems.

Web Developer

Webmob Information Systems Pvt Ltd (Chandigarh, India)

March 2016 - May 2018

- Developed and maintained backend services using Laravel and Node.js.
- Built REST APIs and managed MySQL databases.
- Improved application performance and user experience across multiple client projects.

Web Developer

CS Soft Solutions Pvt. Ltd. (Mohali, Punjab, India)

August 2015 - January 2016

- Developed PHP-based applications using CodeIgniter and Laravel.
- Designed and maintained MySQL database structures.
- Implemented new features and optimized legacy codebases.

Education

Master of Computer Applications (MCA), First Division

2009 - 2014

Guru Jambheshwar University of Science and Technology, Hisar, Haryana

Key Projects

SaaS Infrastructure & Deployment Management Platform

Engineered a scalable SaaS platform with dynamic deployment capabilities, automating environment provisioning through Terraform service integration. Implemented an event-driven architecture to manage system life-cycles and trigger contextual SMTP notifications based on real-time deployment and health status. Built robust dashboards for license monitoring and subscription management.

Node.js TypeScript Event-Driven Architecture SMTP MongoDB Stripe

FinTech & Crypto Platforms

Integrated BTC, BCH, ETH, XRP, ADA, LTC wallets and blockchain APIs. Implemented secure transaction handling and payment workflows. Built microservices architecture for high availability.

Node.js NestJS Web3 Blockchain APIs Microservices

Scalable Real-Time Chat & Communication Platform

Engineered a high-concurrency real-time chat system supporting private and group messaging. Implemented features like message delivery receipts, typing indicators, and online presence tracking. Optimized performance using Redis for session management and Socket.IO for low-latency communication.

Node.js Socket.IO Redis MySQL Express.js

AI-Powered Automation & Multi-Purpose Chatbot Platform

Developed a comprehensive AI platform featuring a Node.js backend and a modern frontend for deploying automated chatbots across diverse domains. Integrated local LLMs via Ollama and GGUF models for data privacy, alongside third-party APIs like Google Gemini for advanced reasoning. Scaled intelligent workflows for automated customer support, document analysis, and task automation.

Node.js Express.js Ollama GGUF models Google Gemini API LLMs
